Special Issue

New Developments in Pediatric Cystic Fibrosis Therapy: Current Trends and Future Possibilities

Message from the Guest Editors

CFTR modulators have revolutionized the treatment of patients with cystic fibrosis, significantly improving their survival and quality of life. The early initiation of treatment in childhood with highly effective modulators opens a window of opportunity to improve patient prospects beyond the lung.

This Special Issue is interested in research articles and literature reviews that discuss the safety and efficacy of treatment with modulators in the pediatric age group. We wish to address the multisystemic nature of this disease; these research areas may include (but are not limited to) the following topics:

Pulmonary topics
Digestive topics
Nutrition topics
Endocrine topics
Mental health and quality of life topics
Renal topics

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

 free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:
