Research Progress in Breastfeeding

Message from the Guest Editor

According to WHO, “breastfeeding is one of the most effective ways to ensure child health and survival”. It provides health benefits for both mothers and children. There are, however, questions about the impact of specific components in human milk like human milk oligosaccharides (HMOs), choline, and many more on health outcomes later in life. Moreover, the effects of nutrition interventions to strengthen the health literacy of women of childbearing age and the impact of measures to support breastfeeding and to increase its rate, exclusivity, and duration are important fields of research. Breastfeeding promotion is important to support health from the early beginning. Therefore, the goal of this Special Issue in *Breastfeeding* is to highlight short- and long-term benefits for mothers and infants. We welcome reviews and original research considering novel approaches, as well as identifying gaps in knowledge.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
