Depression in Adolescents: Risk, Outcomes, and Intervention

Message from the Guest Editor

Depression constitutes a major public health concern, with increasing prevalence from early to late adolescence. This condition can induce various challenges, including emotional, social, and physical health issues, and is a significant risk factor for suicide, the second leading cause of death among adolescents. As depression rates continue to rise, there is an urgent need for innovative strategies to identify risk factors, understand the underlying mechanisms of depression, and improve intervention efforts.

This Special Issue, “Depression in Adolescents: Risk, Outcomes, and Intervention”, welcomes original research and literature reviews that examine the diverse factors contributing to adolescent depression. Contributions to this Special Issue should help identify key factors to consider in detecting depression early and guide the development of targeted interventions to more effectively address the growing incidence of depression in this vulnerable population.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
