Special Issue

Recent Advances in Child and Adolescent Psychiatry

Message from the Guest Editor

Disorders affecting children and adolescents are increasingly seen as having highly specific features, and, therefore, require an equally specific approach despite the coexisting need to integrate contributions from other professions (e.g., pediatricians, psychiatrists, psychologists, and therapists of different sorts). However, the available data are still insufficient, especially for treatment options and too often therapeutic choices are still made based on studies conducted in adults. Even more important, the existence itself of some disorders is questioned especially outside the scientific field (e.g., ADHD).

This Special Issue will provide cutting edge data on all aspects of child and adolescent psychiatry, including etiopatogenesis, clinical characteristics and diagnosis, medical and neurological comorbidities (and psychiatric comorbidities of medical and neurological disorders), impact on patients/families/society (including school and other social groups), prognosis, and treatment options of the different disorders.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

 free for readers, with article processing charges (APC) paid by authors or their institutions.
