Recent Advances in Childhood Hypertension

Message from the Guest Editor

Hypertension, identifiable in children and adolescents, is independent risk factor for hypertension and for hypertension-related cardiovascular consequences in adults. In recent studies, an increased prevalence of childhood hypertension has been demonstrated to be accountable to essential hypertension and a product of epidemic obesity. Moreover, in children, the secondary causes of hypertension must also be excluded; the younger the child, the higher the likelihood of secondary hypertension. Cardiovascular prevention is one of the most important tasks of hypertension management, including primordial prevention. In addition, establishing some early predictors of cardiovascular risk, treatment, and prediction of outcome are of the utmost importance. In this Special Issue, we would like to include some new points regarding childhood hypertension epidemiology, pathophysiology, management, treatment, and prevention. We encourage the submission of original research, reviews, meta-analyses, or interesting case studies which address the recent advances in the investigated field.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
