

## Special Issue

# Impact on Children's Health from Pesticide

### Message from the Guest Editors

Prenatal and early-life exposure to pesticides are important risk factors that may affect children's health. However, current studies about the associations between prenatal and early-life pesticide exposure and children's growth, developments, and health conditions are controversial. Moreover, little research has investigated the long-term effects of pesticide exposure as well as the health effects of mixed pesticide exposure among children. Therefore, we propose this Special Issue to achieve an in-depth understanding of the impact on Children's Health from Pesticide. This issue will highlight cutting-edge empirical studies that focusing on the consequences of pesticide exposure on children's health, including physical growth, neurodevelopment, behavioral issues, mental health, etc. Studies on mixed pesticide exposure, long-term health effects, as well as critical windows of susceptibility are especially encouraged. In this Special Issue, we welcome original research articles, literature and systematic reviews, and meta-analysis articles.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
