Information Provision and Preparation in the Context of Children's Pain

Message from the Guest Editor

The experience of any pain is likely to be distressing for a child and their family when it is not well understood. Accurate, developmentally-appropriate information prior to medical procedures or surgery may assist children to better understand the experience and how to cope with it, reducing distress and subsequent negative memories of the experience. In the context of chronic and complex pain, information about the biopsychosocial framework and basic concepts of pain neurobiology may be a necessary first step before proceeding with an interdisciplinary pain program. The goal of the Special Issue is to highlight recent advances and gaps in knowledge in information provision and preparation in the context of children's pain across a range of clinical settings. We also encourage submissions that explore how cognitive-development, social and cultural factors, past pain experiences, and individual differences may impact on information provision and preparation methods and efficacy. Finally, we invite submissions exploring communication about children's pain to the broader public, using social media and other technology.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
