Complementary Feeding in Newborns

Message from the Guest Editor

Early nutrition and growth are key contributors to the modulation of both short and long-term infant health outcomes. The introduction of solid foods (thereafter referred to as weaning) is associated with major changes in both macronutrients and micronutrients intake, with the risk either of nutritional deficit or excess for infants undergoing a rapid growth during this period of life. Currently, research suggests to deepen the concept of personalized nutrition in all stages of life, including the earliest ones. Therefore, we think that it's important to focus on complementary feeding, regarding also the possibility of vegetarian weaning and baby-led weaning, representing the new frontier in the international panorama.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
