Comprehensive Care for Children with Obesity: Best Practices and Multidisciplinary Treatment Approaches

Message from the Guest Editor

Childhood obesity develops as a result of a complex interplay between genetic, epigenetic, environmental, and behavioral factors. Childhood obesity affects children from racial and ethnic minorities disproportionately. Treatment of obesity in children therefore requires a multifaceted, multidisciplinary, and culturally appropriate approach. This Special Issue, “Comprehensive Care for Children with Obesity: Best Practices and Multidisciplinary Treatment Approaches” will focus on the existing and novel treatment approaches to care of childhood obesity and related comorbid conditions. It will emphasize the importance of individualizing the treatment approach based on obesity pathophysiology and health consequences. The efficacy of lifestyle modifications and pharmacotherapy for treatment of childhood obesity is modest, and therefore, there is a continued need to evaluate novel treatment approaches that will augment the effect of current treatment modalities.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
