Updates in Congenital Infections: Pathology, Diagnosis, Management and Outcomes

Message from the Guest Editors

Congenital infections still represent a major burden of morbidity and mortality worldwide. Despite several advances made in the understanding of their aetiology, methods for their optimal management and means for the prevention of several groups of infections are still unknown. Moreover, SARS-CoV-2 has been added to the list of known agents able to infect pregnant women and cross the placenta, causing vertical infections. The aim of this Special Issue is to link expert and young researchers in the field to share updated perspectives on congenital infections. We are interested in studies discussing epidemiology, diagnostics, and clinical and management implications, as well as social issues related to the topic (including, but not limited to, socially fragile populations).

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
