Hip Disorder in Children and Adolescents: Diagnosis and Surgery

Message from the Guest Editor

Hip disorders might be congenital, presenting at birth, or they might develop during early and/or late childhood. Although they all affect the same anatomical district, they are very different at clinical presentation, ranging from being almost asymptomatic to being very painful. In many cases, as in developmental dysplasia of the hip, they can be silent or mildly evident with an aspecific presentation on clinical examination. In other cases, as in Perthes disease, SUFE and FAI, they can be symptomatic. As such, the diagnosis of hip diseases might be challenging, but prompt and proper planned surgical treatment is particularly important. This Special Issue of *Children* aims to highlight the most recent research findings related to this topic. Specifically, the present Special Issue welcomes original or review papers which will focus on the diagnosis, treatment and surgery of pediatric hip diseases to increase our understanding of these conditions and standardized or newly available treatment solutions, as well as sharing knowledge about incompletely understood and controversial areas in this field. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
