

Special Issue

COVID-19 and Pediatric Emergency Medicine

Message from the Guest Editors

The COVID-19 pandemic has overwhelmed the global health care system for more than 2 years. Pediatric emergency medicine was the most affected department. The pandemic not only causes the disease and the related complications, but it also changes the pediatric epidemiology. The aim of this Special Issue is to collect new research about the influence of the COVID-19 on pediatric emergency medicine and emergency department, including the treatment strategies, anti-epidemic policies, and the change of epidemiology. We also aimed to collect research focused on pediatric emergencies and complications caused by COVID-19 and their treatment or critical care. Studies focused on medical education of pediatric emergency medicine training during the pandemic are also welcomed. We invite all experts to submit manuscripts related to these topics, including original papers, case reports, and systematic or literature reviews. We look forward receiving your valuable research and hope this Special Issue can help health providers to learn new advances of pediatric emergency medicine during the COVID-19 era.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
