

Special Issue

Eating Disorders and Obesity in Children and Adolescents

Message from the Guest Editor

Eating disorders continue to be one of the disorders with the highest prevalence among children and adolescents, especially in women. Anorexia Nervosa and Bulimia Nervosa are the main disorders at this stage of life. Eating disorders occur with significant comorbidity and are diseases that seriously alter the lives of children and adolescents who suffer from them, with important consequences for adult life. We need to broaden our knowledge of these disorders to reduce the impact among adolescents, either through preventive strategies or by improving treatments. The identification of risk factors or risk indicators has in recent years become a main objective in the investigation of these disorders. In this Special Issue of *Children*, papers that explore the etiology, prevalence, symptoms, risk factors, evaluation strategies, treatments, psychosocial or biomedical consequences, and any other aspect from a medical, nutritional, psychological, psychiatric or social point of view of eating disorders in children and adolescents are welcome. The format of the papers may include original research, systematic literature reviews, narrative reviews, and case reports.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
