Children and Adolescent Mental Health Problems and Prevention

Message from the Guest Editor

Psych/mental health during childhood significantly impacts morbidity and mortality later in life. Rural communities are often viewed as devoid of the social problems facing urban communities. Rural families, however, experience stress due to high unemployment rates, low educational opportunities, and a high incidence of poverty and inaccessibility of PsychMental health care. These families are at increased risk for substance use, violence and associated psychological distress that occurs when attempts to cope with stress fail. These stressors place children affected by barriers of culture, poverty and remote access to PsychMental health care at a higher risk for these negative health outcomes. There is a need for additional investigation concerning rural mental health for children. The goal of this Special Issue is to discuss any aspects of children's mental health in rural areas to enhance global understanding of these conditions by sharing knowledge about incompletely understood and controversial areas in this field. We invite investigators to contribute original research articles, as well as review articles. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
