Advances in Research on Childhood Immune and Allergic Diseases

Message from the Guest Editors

Childhood immune diseases comprise a wide range of conditions, including inborn errors of immunity, and allergic, immune dysregulation, autoinflammatory, autoimmune and lymphoproliferative disorders as well as organ-specific immunopathology. Attempts are being made to identify the prognosis, patterns, severity scale of outcomes, and the global social and psychological burden of inborn errors of immunity and allergic diseases among pediatric patients. Significant progress has been made recently in uncovering the genetic, molecular, immunological and environmental underpinnings of childhood immune and allergic diseases. The aim of this Special Issue is to better understand the immunogenetic background and clinico-pathological interconnections of childhood immune and allergic diseases. The thematic scope of articles will encompass the clinical, diagnostic and therapeutic aspects of these disorders. In this Special Issue, original research articles and reviews are particularly welcome. Instructive case reports on unusual immune and allergic conditions in children are also accepted.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
