# Research Progress on Gait Analysis of Children with Cerebral Palsy

### Message from the Guest Editor

Cerebral palsy (CP) is a brain (neurological) disorder that causes problems with normal motor function. It is a lifelong condition that affects how the brain and muscles communicate. CP affects body movement, muscle control, coordination, reflexes, posture, and balance. These problems are caused by damage to or abnormal development of certain brain areas. However, many children with CP have normal intelligence. CP can range in severity, but it neither worsens nor improves over time. With diagnosis and treatment, children can learn how to manage their condition. We welcome the submission of original research papers, case reports, short communications, and literature/systematic reviews.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
