

Special Issue

The Health Effects of Daily Physical Activity Behaviours in Children: Physical and Psychological Outcomes

Message from the Guest Editors

Physical activity has multiple benefits for health, as well as for cognitive and motor development in children and adolescents, and the latest research and scientific studies reflect the evolution of the field and the growing interest in this area. Nevertheless, there continues to be a need to keep researching this topic. Through this Special Issue, we aim to disseminate quality research related to the effects of physical activity on physical and psychological outcomes in children and adolescents. Authors are invited to submit original research (empirical, quantitative, or qualitative) manuscripts, as well as systematic reviews or meta-analyses. All of them will be welcome as long as they deepen and expand the understanding of how physical activity relates to one or more of these topics: obesity; healthy habits; cognitive functions; psychology; academic performance; health; stress; well-being.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
