Headache in Children and Adolescents

Message from the Guest Editors

Chronic headache in childhood is an increasing problem in our society and a challenge for our healthcare systems. Children and adolescents suffer mainly from migraines and tension-type headaches. However, increasingly, children report daily headaches with emotional co-morbidities and an overuse of analgesics. Consequences are significant for each child, their families, and for society. Children with chronic headache often miss school, which may result in their academic performance being worse than that of their classmates without headache. Healthcare systems spend a significant amount of money treating these patients. If treatment is not effective, our society bears the burden of young adults who continue to suffer from headache. In this situation, we welcome scientific studies on therapeutic strategies, from prophylactic measures to multimodal treatment options, that can help to address this problem, relieve suffering, and stop the silent pandemic of childhood headache.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
