

Special Issue

Clinical Advances in the Diagnosis and Management of Pediatric Turner Syndrome

Message from the Guest Editor

This Special Issue will focus on recent clinical and translational advances in the diagnosis and management of pediatric Turner syndrome. Topics of interest include early-detection strategies, such as prenatal and postnatal genetic testing, and emerging insights into genotype–phenotype correlations. We aim to highlight evidence-based approaches to growth promotion, optimization of pubertal induction and hormone replacement therapy, and the management of associated comorbidities, particularly cardiovascular, metabolic, endocrine, and neurocognitive complications. Contributions addressing advances in imaging, biomarkers, and risk stratification are encouraged, as well as studies on multidisciplinary care models, transition, health equity, and long-term outcomes. This issue seeks to integrate current research with clinical practice to refine management strategies and improve patient-centered outcomes.

Guest Editor

Dr. Iris Gutmark-Little

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Professor Emeritus, University of North Carolina at Chapel Hill, Chapel Hill, NC 27516, USA
