Congenital Urinary Malformations: Diagnostic Management, Treatment and Outcome

Message from the Guest Editors

Congenital malformations of the urinary system and kidneys represent a vast chapter in pediatric nephrourology. Many of these conditions require close collaboration between pediatric specialists in both medical and surgical fields, who, by studying the entire aspect of the abnormality, can achieve the best outcome with the least invasive treatment.

With the aim of exploring fundamental aspects of certain conditions and addressing some still-debated questions, in this Special Issue, we present our experience and recent findings from the literature.

Similarly, significant attention should be given to ureteral malformations, which, in their severe forms, still present treatment challenges due to potential short- and long-term complications. The desire to tackle issues such as hypertension and solitary kidney, as well as varicocele, reflects a specific interest in prevention for adult well-being, thereby reducing risk factors which could compromise quality of life.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
