Inflammatory Bowel Disease in Children: Diagnosis, Treatment Status and Early Recognition

Message from the Guest Editors

Inflammatory bowel diseases (IBDs), including ulcerative colitis (UC) and Crohn's disease (CD), are chronic immune-mediated disorders of the gastrointestinal tract. They are most often diagnosed in adolescence and young adulthood, with a rising incidence in pediatric populations worldwide, including in emerging nations. IBD continues to have a negative impact on patients' quality of life, and the rates of complications, surgery and hospitalization remain high. Pediatric IBD comes with unique additional challenges, such as growth impairment, pubertal delay, the psychology of adolescence and the development of body image. In recent years, significant progress in treatments has profoundly changed the management of IBD in children, and changes in therapeutic strategies over the past few decades have altered the natural history of pediatric IBD. Given the progressive enrichment of therapeutic armament and the emergence of new therapeutic objectives and monitoring strategies, this Special Issue will consider early recognition and management strategies in both UC and CD in children through original research and reviews.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
