Pediatric Gastrointestinal Diseases: Diagnosis, Management and Surgical Treatment

Message from the Guest Editors

The burden of gastrointestinal illness in pediatric age is high and continues to increase. Gastrointestinal diseases include a large spectrum of conditions ranging from congenital to acquired pathologies, which often require intervention. Notably, gastrointestinal endoscopy has become a key element in the diagnosis and therapy of many of these diseases that affect children. Moreover, in recent years, new technologies have been incorporated into the armamentarium of surgeons treating pediatric patients with gastrointestinal diseases. In particular, minimally invasive and robotic-assisted techniques have carved a space in cases requiring surgical correction. In addition, fluorescence-guided surgery has shown the advantage of allowing surgeons to better recognize anatomical structures, and artificial intelligence (AI) is currently gaining ground in the pediatric surgical field as well.

This Special Issue aims to discuss advances in the diagnosis, management, and/or surgical treatment options of gastrointestinal diseases in pediatric age. Colleagues and researchers are invited to submit their manuscripts. We look forward to receiving your valuable contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
