Advances in Pediatric Multisystem Inflammatory Syndrome (MIS-C)

Message from the Guest Editors

Multisystem inflammatory syndrome in children (MIS-C) is a newly identified clinical entity that has been linked to SARS-CoV-2 infection in children, adolescents and young adults. MIS-C represents a “hot topic” at present, given the direct correlation with SARS-CoV-2 infection and the high percentage of patients requiring intensive care unit (ICU) admission and aggressive therapy. Indeed, data regarding disease epidemiology and pathogenesis, but also the best treatment strategy and outcome, are very heterogeneous. Recently, a more aggressive therapeutic approach in the early phases of the disease showed greater efficacy in terms of reducing ICU access and allowing better long-term outcomes. The purpose of this Special issue is to provide cutting-edge data on MIS-C, for a better understanding of all aspects of the disease. Original data from observational and registry studies will be kept in the utmost consideration, but we will also consider reviews and case reports if they present advances in our understanding of the disease.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
