The Treatment of Myopia and Refractive Errors in Children

Message from the Guest Editors

Refractive error is the inability of the eye to properly focus light onto the retina, resulting in blurred vision, and this can be classified into myopia (short-sightedness), hyperopia (long-sightedness), and astigmatism. Refractive errors are typically corrected by wearing glasses or contact lenses, or through refractive surgery to improve visual clarity.

In recent years, the prevalence of myopic refractive error has increased, most likely caused by changes in children's visual environments. While the vision defect caused by myopia is easily correctable, the elongation and stretching of the eye are associated with an increased risk of future sight-threatening pathology. Therefore, the increasing prevalence of myopia is a significant public health concern.

This Special Issue invites the contribution of original articles, systematic evaluations, and analyses on myopia and refractive error treatment in children. We welcome your valuable contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
