Advances in Research on Nutrition and Childhood Obesity: 2nd Edition

Message from the Guest Editor

Obesity is a complex, multifactorial health problem that in recent decades has emerged as a major contributor to the morbidity of chronic diseases during childhood. Several lifestyle factors are being intensively researched since they are modifiable and could be easily used in preventive interventions; nutrition is among the most crucial of them. Either seen as micro- or macronutrient intake or as composite dietary patterns, the multiplex effect of the interrelated foods consumed by children—in innumerable types, sizes or frequencies—on the development or the exacerbation of several chronic diseases has not been thoroughly investigated. Thus, it is of great importance to create a Special Issue for the research of the nutrition and the obesity in childhood and adolescence. Considering the success and popularity of the Special Issue "Advances in Research on Nutrition and Childhood Obesity" previously published in the journal *Children* (https://www.mdpi.com/journal/children/special_issues/Nutrition_Childhood_Obesity), we now release a second issue aiming to gather original research papers and review articles focused on children nutrition and obesity.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
