

## Special Issue

# Dietary Considerations in Childhood Obesity

### Message from the Guest Editors

The prevalence of childhood overweight and obesity has been increasing worldwide, adversely impacting children's immediate health and exposing them to an increased risk of various noncommunicable diseases over their life course. This Special Issue seeks to feature research on the epidemiological relationships between diet and health, dietary interventions to enhance health outcomes, assessments of the food environment, investigations into consumer perceptions and experiences shaping children's dietary behaviors, and implementation science approaches to effectively translate evidence into actionable policies and practices. By highlighting the interplay between nutrition, obesogenic environmental factors, and implementation science, we aim to provide insights that can inform both policy and practice. We invite all colleagues researching topics related to childhood dietary intake, eating behaviors, food environments, and childhood obesity to contribute to this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
