Current Research on Pediatric Allergy and Immunodeficiency

Message from the Guest Editor

Immunodeficiency, a simple impairment of immunity in a narrow sense, is characterized by severe and chronic/repetitive infection. However, it can also cause allergic diseases such as atopic dermatitis, as well as autoimmune and autoinflammatory diseases. The concept of immunodeficiency can be expanded to all types of immune dysregulation. Actually, the 2019 updated IUIS classification has defined primary immunodeficiencies as human inborn errors of immunity. In this issue, current research topics on various aspects of allergy and immunodeficiency in children are welcome, in order to discuss what has been achieved, what is now going on, and what remains to be clarified in the field of pediatric allergy and immunodeficiency.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
