Advances in Research on Neurologic Related Diseases in Children

Message from the Guest Editor

Neurological problems in children are a source of great concern and anxiety to parents and caregivers. Fortunately, there have been rapid developments in our understanding of genetics which have led to the ability to define the genetic and molecular basis of many neurological disorders in children—in some cases, allowing the practice of precision medicine in areas of developmental delay, epilepsy, metabolic disorders, stroke, and neuromuscular disorders. We must keep abreast of these advances so as to care most appropriately for our patients. In addition, there have been tremendous advances in our understanding of neuroimmunology as well, which has led to much better diagnostics and therapeutics in these patients and improvements in our ability to treat disorders that were previously unrecognized. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
