Sensory Impairments in Children with Neurodevelopmental Disabilities

Message from the Guest Editors

Early sensory experiences are critical from birth to adulthood, and significantly influence neurodevelopment. They are necessary to gather information during exploration of the surrounding environment, but the environment also influences the development of sensory systems because of the close relationship between neural networks and environmental events. Dysfunctions in the sensory functions of children with neurodevelopmental disabilities can influence their clinical profile, producing cascading effects on motor, cognitive, and socio-communication development. In these children, sensory functions can be impaired to different degrees: from severe difficulties in children with cerebral palsy, to sensory processing dysfunctions in children with ASD, for example. This Special Issue will provide an overview of the most recent advances in the field of sensory impairments in children with neurodevelopmental disabilities. We aim to present cutting-edge research and reviews that address a broad range of topics.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank:
