

Special Issue

Stabilization and Resuscitation of Newborns

Message from the Guest Editor

Annually, approximately 13–26 million newborns worldwide need respiratory support immediately after birth, and another 2–3 million newborns need extensive resuscitation including chest compressions and drug administration. Therefore, further research is highly warranted supporting or introducing novel therapies or concepts in the area of the stabilization and resuscitation of preterm and term newborns. Current hot topics in the field include initial ventilation strategies, (difficult) airway management, oxygen titration, the timing of umbilical cord clamping, body temperature control, cardiocirculatory support such as chest compressions, vascular access and emergency medication, and post-resuscitation care. Another crucial topic is neonatal resuscitation education including simulation-based training to improve patient safety and clinical outcomes. In this Special Issue in *Children*, we focus on recent aspects of neonatal stabilization and the resuscitation of preterm and term infants.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
