Advances in Pediatric Oral Surgery and Oral Pathology

Message from the Guest Editor

Pediatric oral/dental pathology manifests itself in different structures such as the mucous membranes, teeth, bone or temporomandibular joints. Diseases of the oral cavity require updating epidemiological knowledge, diagnoses and treatment alternatives. The care of pediatric patients with other systemic diseases frequently requires multidisciplinary collaboration for oral diagnosis and treatment. The main objective of this Special Issue is to update knowledge and pediatric oral pathology in terms of epidemiology, pathology, diagnosis and treatment, considering the development of new technologies. This Special Issue seeks to gather together cutting-edge research on the development of therapeutic alternatives with lower morbidity and diagnostic techniques based on new technologies for medically compromised child patients. We welcome original papers such as clinical trials, meta-analysis, systematic reviews, bibliographic reviews, case series and clinical cases.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
