The Recent Advances in Pediatric Esophageal Surgery

Message from the Guest Editor

In recent years, there have been remarkable advances in the knowledge of pediatric esophagus disease, demonstrating the enthusiasm that researchers all over the world have for this field of medicine. The strategy of surgical treatment is constantly changing and has been the subject of academic discussion. Minimally invasive approaches, interdisciplinary treatment strategies, robotics, endoscopic surgery, and new technologies are of great interest. The goal of this Special Issue is for academics to discuss any of these mentioned topics and to share their experiences related to this field. Surgeons and researchers are encouraged to contribute their most innovative manuscripts. A variety of contributions to this Special Issue are welcome: papers, review articles, systemic reviews, proposals for new strategic approaches, and prospective/retrospective case studies. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
