Pediatric Bone Disorders: Focus on Children's Bone Health

Message from the Guest Editors

Pediatric bone health is a cornerstone of overall childhood development and growth, yet it remains a complex field due to the wide spectrum of bone disorders seen in children. These disorders range from congenital and genetic conditions, such as osteogenesis imperfecta and rickets, to acquired issues like metabolic bone diseases, and infection-related osteomyelitis. Advances in diagnostic imaging, molecular genetics, and surgical interventions have significantly improved the understanding and treatment of pediatric bone diseases. This Special Issue, "Pediatric Bone Disorders: Focus on Children's Bone Health", aims to bring together cutting-edge research and clinical advancements that explore the etiology, diagnosis, treatment, and rehabilitation of pediatric bone disorders. Contributions focusing on innovative approaches to diagnosis, therapeutic strategies, and long-term care to improve quality of life in children are especially encouraged. We invite experts from diverse disciplines to share their work, fostering collaboration and improving the management of pediatric bone disorders.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
