Recent Advances in Obstetrics and Perinatal Medicine

Message from the Guest Editors

Research in high-risk pregnancies has increased in recent years, being highlighted and treated by obstetricians, perinatologists, and neonatologists, with the contribution of co-related specialties involved in the care of mothers and newborns. Assisted reproductive techniques, progress in neonatal care, and widespread guidelines and protocols both in obstetrics and neonatology have contributed to decreasing the limit of viability to 22 weeks' gestation in developed countries and 24–26 weeks' gestation in low-income countries. This is a significant development; however, a real burden is placed on the individual, their family, and the healthcare and social systems in low-income countries, considering that the long-term outcome of neonates from a high-risk pregnancy may be impaired by severe sequels. This Special Issue aims to gather scientific evidence relating to care of the mother and child, according to recent advances in their quality of their life, with a focus on interdisciplinary teamwork, from conception to the later neurodevelopment of a child. We welcome all researchers to contribute to this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
