Advances in Childhood Diabetes

Message from the Guest Editor

The incidence of type 1 autoimmune childhood diabetes is continuously increasing worldwide. As genetic factors are stable, environmental factors, mainly viruses, have been implicated. The classic therapy with insulin has undergone many changes, from daily injections to pump delivery and a closed-loop artificial pancreas. As we are still missing an ideal treatment, early and late complications occur. The chronic character of this disease remains and no cure is in sight, causing psychosocial problems in parents and children. Type 2 diabetes, related mainly to obesity, is also increasing in its incidence in both developed and underdeveloped countries. Both types of diabetes have become public health problems, and research into the development of prevention interventions is urgently needed.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
