Special Issue

Diagnosis and Surgical Care of Pediatric Cancers

Message from the Guest Editors

Significant progresses have been observed in the field of diagnosis and treatment of pediatric cancers in recent decades. Notably, in recent years, new techniques have been incorporated into the armamentarium of surgeons dealing with pediatric cancer patients. In particular, laparoscopic- and roboticassisted surgery have carved their space in the adult cancer population with evidence supporting less pain, shorter hospital stays, lower complications, and equivalent long-term survival and oncologic outcomes; and hopefully they may have a role in pediatric cancer surgery as well. In addition, the improvement in the quality imaging has allowed a three-dimensional visualization and printing to be incorporated into surgical practice, and fluorescence-guided surgery showed the advantage to distinguish anatomical or physiologic differences between cancer and normal tissue. This Special Issue aims to discuss advances in diagnosis and surgical care of cancers in pediatric age. Colleagues and researchers are invited to submit their manuscripts. We look forward to receiving your valuable contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
