Advances in Dyspraxia and Developmental Coordination Disorder in Children

Message from the Guest Editors

Developmental Coordination Disorder (DCD) is a neurodevelopmental condition that affects a child's ability to execute coordinated gross and fine movements, resulting in slow, awkward, or imprecise actions and challenges in acquiring new motor skills, poor balance, and difficulties with daily activities such as grasping objects, dressing, and writing. To enhance our understanding of DCD, we invite submissions that explore a range of topics, including but not limited to the following areas: 1. Performing a comprehensive evaluation of children's body functions and structures, their activities and participation, as well as the environmental factors at play. 2. The development and assessment of intervention strategies aimed at improving cognitive-motor and psycho-social skills are important. We encourage experts and academics in this area to contribute scientific reports related to this Special Issue, considering your interest in the topic. Researchers and practitioners are invited to describe their initiatives aimed at creating innovative methodologies or inclusive educational approaches that emphasize assessment and intervention.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
