Lung Diseases in Children: From Rarer to Commonest

Message from the Guest Editors

Pulmonary diseases are common acute and chronic diseases in the general population, including in children. These diseases can occur from very early childhood or later in life. The prevalence and economic burden associated with this disease are increasing worldwide. Pediatric pulmonology is highly relevant, as many overlapping areas require a combined approach that leads to a complete understanding of the disease processes. This Research Topic aims to update the knowledge on the pathogenesis, clinical presentation, diagnosis, and treatment of congenital and acquired pulmonary diseases. Papers focused on rare pulmonary diseases will be most welcome. Due to the low prevalence and severity of many of these diseases, whose symptoms often initially manifest in early infancy, combined efforts are required to improve the understanding of the pathophysiology and diagnostic management of these diseases, as well as to develop novel and more effective treatments. Finally, in the era of the COVID-19 pandemic, any research on the diagnostic and therapeutic management of patients suffering from pulmonary diseases, who have been infected with SARS-CoV2, is especially welcome.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
