Evaluation of Long-Term Outcomes of Congenital Diaphragmatic Hernia

Message from the Guest Editors

As a result of improved prenatal diagnosis, protocolized perinatal care, and implementation of new treatment modalities, more neonates born with Congenital Diaphragmatic Hernia (CDH) now survive. During the past decades, interest has shifted from survival to long-term outcomes. We have learned that, apart from having disease-specific morbidities, children with CDH are at risk for neurodevelopmental problems and failure of educational attainments which may affect their participation in society. International collaboration to develop long-term multidisciplinary follow-up programs for these children is important not only to improve their outcome at an individual level, but also to define universal outcome sets for future intervention trials. This Special Edition will explore standardized outcomes in children and adolescents with CDH and the availability and validity of multidisciplinary assessment instruments that have been used in this population.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
