

## Special Issue

# Digital Advancements in the Psychological Management of Pediatric Chronic Illness

### Message from the Guest Editors

Digitally delivered healthcare is rapidly expanding across pediatrics, and specifically in behavioral medicine. The proliferation of digital management (e.g., eHealth, mHealth, and telehealth) and data collection (e.g., wearable sensors, ecological momentary assessment, and passive mobile sensing) systems, as well as novel adaptive clinical trial designs, has shifted the way we think about engaging with patients, extended the reach of specialized care, and moved the field closer to personalized medicine. These advancements have been made possible by improvements in digital technology and near ubiquitous access to the Internet and Internet-accessible personal devices for children across the developmental spectrum and their families. This Special Issue will explore a range of digital advancements in the psychological assessment and treatment of pediatric chronic illness with the ultimate goal of charting a pathway for new and promising directions for the field.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
