Intensive Care for Very Preterm Infants

Message from the Guest Editor

Very preterm infants, whose gestational age is less than 32 completed weeks, account for 1% of babies every year. Though this population's survival has improved in recent decades, the intensive care for them is still challenging to improve the short-term and long-term outcome beyond survival. Multidisciplinary care for very preterm infants is always required in antenatal care and consultation, the golden hour intervention after birth, acute-phase care of the first 72 hours of life, transition care in the first week of life, and continuous care extra-uterine growth phase to discharge. In the artificial intelligence era, high technology may also help the care of very preterm infants for early detection or prevention of the morbidities or mortality of very preterm infants. Long-term follow-up after graduation from intensive care units is important for feeding back to improving clinical care. We welcome review articles, original research, and case reports from across the globe relating to the issues of intensive care and follow-up for very preterm infants.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
