

## Special Issue

# New Insight in Neurodevelopmental Disorders in Children

### Message from the Guest Editors

Neurodevelopmental disorders are common problems encountered in the pediatric population.

The term “neurodevelopmental disorder” is broad and covers both genetically determined problems as well as those coming from environmental, infectious and traumatic causes. The occurrence of some of these disorders results from a multifactorial background. Some neurodevelopmental diseases have a specific clinical course and specific symptoms, while others have a very rich symptomatology, and the symptoms come from various organs and systems. Moreover, the appearance of concomitant symptoms changes the presentation of the underlying condition. Currently, the possibility of using modern research techniques (i.e., neuroimaging), and –especially the progress in the field of genetic diagnostics, makes it possible to recognize certain diseases and their causes with greater success and efficiency. In this Special Issue we would like to welcome articles, including original research articles, reviews, meta-analyses or case studies, which address the scope of neurodevelopmental problems in children.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
