Pediatric Bariatric Surgery

Message from the Guest Editors

A variety of procedures have been recently used in children and adolescents with severe obesity and obesity-related co-morbidities, including laparoscopic adjustable gastric band, vertical sleeve gastrectomy, and Roux-en Y gastric bypass. In addition, there has been recent discussion and investigations into the use of limited endoscopic procedures. Management of this population both pre-procedure and post-procedure requires a multidisciplinary approach for successful long-term results. This Special Edition on "Pediatric Bariatric Surgery" will explore the history of and types of pediatric bariatric surgical procedures, long-term outcome data (>5 years) in children and adolescents (weight, co-morbidities), nutritional management, behavioral management, and parental weight loss surgery upon family dynamics. The goal is to inform and update readers by providing an overview of long-term perspectives, emerging research, and clinical options including useful tools specific to this population.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
