

Special Issue

Epithelial Cancers: Molecular Mechanisms, Diagnostic Innovations, and Therapeutic Advances

Message from the Guest Editor

Dear colleagues, Epithelial cancers originate from the epithelial cells lining organs and tissues and constitute a significant portion of human malignancies. This special issue aims to focus into the intricate molecular processes underlying the development and progression of epithelial cancers, potential interferences and common pathways, as well as specific mechanisms and particularities. By encompassing a wide range of topics from molecular biology to clinical practice, our special issue aims to provide a platform for current advancements and future directions in the field of epithelial cancers. We encourage contributions that offer new insights, propose innovative approaches, highlight the translational potential, and overall aim to improve patient outcomes in the context of this type of malignancy.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.8 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names are published annually in the journal.
