Latest Multifactorial Developments on Neuropsychiatric Disorders and Manifestations

Message from the Guest Editor

Recently, related neuropsychiatric disorders such as depression and dementia have emerged and cause a huge disease burden. Over the past few decades, the understanding of neuropsychiatric disorders in the population has advanced to a new level. Many molecular mechanisms have been identified and progress has been made in developing prevention and treatment strategies. Considering that, lately, almost all the unidirectional theories referring to neuropsychiatric disorders/manifestations are basically dismissed and that there is an increased awareness of the multifactorial approach of this matter, this Special Issue focuses on understanding the multifactorial basics of these central disorders. This mainly refers but is not limited to: Alzheimer's disease, Parkinson's disease, schizophrenia, autism, anxiety, depression, traumatic brain injury, etc.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.8 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names are published annually in the journal.
