

## Special Issue

# The Molecular Basis of Genetic and Epigenetic Changes in Cancer

### Message from the Guest Editor

Cancer is a complex disease driven by genetic and environmental factors, yet many underlying molecular mechanisms remain unclear. Genomic dysregulation is a key aspect of carcinogenesis, and identifying novel genomic markers can help in developing targeted treatment strategies. However, disparities in genomic research, particularly in minority populations, limit the scope of cancer prevention and treatment. This Special Issue seeks to address these disparities and enhance the prediction of cancer development, recurrence, and prognosis through diverse research approaches. We invite submissions of original research, reviews, and analyses focused on genetic and epigenetic changes in cancer, especially those relevant to minority populations. We look forward to your contributions.

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,  
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and  
other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 17.8 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the first half of 2025).

##### Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and  
reviewer names are published annually in the journal.
