

Special Issue

Future Challenges of Targeted Therapy of Cancers: 2nd Edition

Message from the Guest Editor

The scope of this Special Issue is to collect papers referring to updates in the targeted therapy of cancers. As individualized therapy in the future is predicted to be mainly based on gene profiles, a deeper understanding of the genetic background is essential, spanning from cell lines to circulating tumor cells and tissue biomarkers. Data concerning the heterogeneity of tumors and a deep understanding of their environment could also have a therapeutic impact. Any research or review papers with potential implications for improving oncologic therapy are welcome, and we encourage the presentation of clinical trial results. If some papers are mainly based on in silico analyses or the examination of public gene databases, they should include an external validation of their own cohort.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.8 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names are published annually in the journal.
