

Special Issue

Molecular Research in Vaccinology and Vaccine Development

Message from the Guest Editor

Vaccines play an utmost role in both human and veterinary medicine. The roots of vaccinology and immunoprophylaxis is dating back to 19. century, the work of Louis Pasteur (1822-1895) and Robert Koch (1843-1910). The idea of vaccines emerged realising we could be able to “teach” immune system to the fight against specific pathogens providing attenuated agents which do not trigger clinical symptoms and generates onset of immunity. Applying this approach our vaccines as specific products with biological profile must be compliant to the following criteria: i.) safety; ii.) efficacy; iii.) potency and iv.) purity. Both the industrial production and authority control serve the completion of these four criteria. Nowadays many particular types of vaccines are at our disposal from the so-called inactivated vaccines to the RNA-based ones. In this special issue, discussions about the example veterinary and human virus the evolution and specific types of vaccines are all welcomed.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Madhav Bhatia

Department of Pathology and Molecular Medicine, University of Otago,
Christchurch 8140, New Zealand

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC, PubMed, Embase, CAPlus / SciFinder, FSTA, AGRIS, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names are published annually in the journal.
