

Special Issue

Hyperlipidemia and Molecular Mechanism in Human and Animals

Message from the Guest Editor

Dear colleagues, Maintaining lipid profiles such as high density lipoprotein and total cholesterol is essential to health not only human but also in animals. The aim of this special issue is to investigate the molecular mechanism of hyperlipidemia related genes and proteins such as ApoA-1 which is related to high density lipoprotein expression and to review the effect of diet and medication, and environmental factor to gene expression. Using the technique of metabolomics, metabolic biochemistry to investigate is welcome. We also welcome novel biomarker for early diagnosis and monitoring of hyperlipidemia related disease.

Submissions are welcome on wide range of hyperlipidemia related endocrine disease such as diabetes mellitus, Cushing's disease, pancreatitis, gall bladder mucocoeles.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.8 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names are published annually in the journal.
