Advances in Molecular Pathogenesis Regulation in Cancer

Message from the Guest Editors

Genetic and epigenetic alterations as well as the crosstalk between tumor cells and their surrounding microenvironment have been widely investigated in order to understand the basis of cancer proliferation, invasiveness, metastasis, and therapeutic resistance.

Despite this increasing knowledge, molecular mechanisms underlying each tumor remain unclear.

Therefore, there is still the need for:

- deeper definition of genetic and epigenetic changes in different tumors;
- better detection of tumor microenvironment components.

This information could lead to the introduction of novel biomarkers for early cancer diagnosis or tailored therapeutic approaches (target therapies). The aim of this Special Issue is to collect papers (original articles and full reviews) on the following topics:

- Cancer biology;
- Cancer genetics and epigenetics
- Molecular mechanisms or pathways involved in cancer;
- Tumor microenvironment;
- Role of the immune system in cancer;
- Biomarkers for cancer detections
- Biomarkers for therapeutic approaches.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Madhav Bhatia

Department of Pathology and Biomedical Science, University of Otago,
Christchurch, 2 Riccarton Avenue, P.O. Box 4345, Christchurch 8140,
New Zealand

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PMC,
PubMed, Embase, CAPus / SciFinder, FSTA, AGRIS, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.8 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names are published annually in the journal.
